

# RollUP – RL700GX-V200

## RL700GX-V200

The model 700 is one of the most compact and lightest members of the RollUP family.

Designed for tight recovery conditions.

All accessories of the RollUP family are compatible - such as floats, towing straps or even suspensions.

This RollUP model is of course approved for technical / rope recoveries.

### No compression of chest, hips, and legs!

Two removable crosswise affixed glass fiber stiffeners prevent the painful and dangerous compression of the chest, hips and legs while offering the same comfort as a rigid basket stretcher. Two removable lengthwise affixed stiffener protects the spine when the stretcher is pulled over an edge or rough ground.

### The underside is free of straps!

The lifting straps are either integrated in the strap system or easily hooked into the triangular plates along the stretcher's sides. This is possible because all lifting straps and carry handles are anchored in the patented steel plates along the edges.
